

The infection is increasing in Sweden again – important to keep following the rules!

The infection is increasing in many European countries again. Also in Sweden. This far, Kalmar county has been doing well. We have to be even more careful to not be affected.

Kalmar county do not have as much disease as almost all the other counties have. But this can change fast.

”If anyone within a family is tested positive for Corona (covid 19), then all family members should stay at home.” Says Lisa Labbe Sandelin, who is infection disease specialist in Kalmar county. “This was decided by The Public Health Agency of Sweden. And if it’s necessary, even more and stricter rules - in the entire, or parts of the county - can be applied.”

If the infection starts spreading in the county again, the Public Health Agency of Sweden and the county’s infection disease specialist, together can develop local general advice (*lokala allmänna råd*).

The advices can for example be not to travel or visit people that belong to an at-risk

group. Or not to visit restaurants, gyms, or other places where many people gather.

It can also be recommendations that says that you should only see people that you are living with.

The rules can be different depending how the disease will spread.

We must have patience. And get use to protect ourselves from the virus in different ways. “The corona pandemic will affect the society for a long time. There will be restrictions at least one year onwards.” Says Johan Carlsson who is Director General of the Public Health Agency of Sweden.
